Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,473,996 to Tokunaga.

3. Tokunaga discloses a wafer processing apparatus in Figures 1-8 including a mini-environment portion having a chamber (best illustrated Figure 4, 21; column 4, row 64) therein and used for transferring a wafer between a clean box (Figures 4, 6 and 7, 30) having a lid (best illustrated Figure 1, 2) and housing the wafer (Figures 4 and 7, 17) and the chamber, said apparatus comprising: a first opening portion (opening in/on unit (21) for transfer into the unit is not illustrated in Figure 4, but necessarily present; column 6, rows 31-40) which is formed on a part of a wall comprising the chamber to be in communication with the chamber, facing an opening of the clean box so as to allow loading and unloading the wafer between the clean box and the mini-environment; and a door (14) that closes, when the transfer of the wafer is not performed, the first opening portion and opens, when the transfer of the wafer is performed, wherein when the wafer transferring operation is performed, the clean box is fixed with a first clearance (see position of treatment unit/mini-environment-21 and container-30 in Figure 4), having a predetermined distance between the opening formed plane of the clean box and the outside surface of the part of the wall in which the first opening portion is formed.

4. With respect to claims 2 and 3, in case that the door is positioned to substantially close the first opening portion, a second clearance through which the chamber and the exterior of the mini-environment

are in communication with each other exists (Figure 7; column 7, rows 23-34; protrusions with a height of H₁ create a second clearance for communication at portions where the protrusions are not located).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

USP 6,530,736 discloses a positionable loading assembly.
